DEKLARACJA ZGODNOŚCI WE EC DECLARATION OF CONFORMITY

Nr DH 7/P1/01/2022

DEFRO R. Dziubeła spółka komandytowa

26-067 Strawczyn, Ruda Strawczyńska 103A

DEKLARUJE / DECLARES

z pełną odpowiedzialnością, że produkt / with all responsibility, that the product

Wolnostojący ogrzewacz na drewno / Wood heating stove DEFRO HOME IGNIS 9 kW

(typ/type: DEFRO HOME IGNIS, DEFRO HOME ORBIS, DEFRO HOME ORTI, DEFRO HOME OVAL, DEFRO HOME DEA, DEFRO HOME SOLUM)

został zaprojektowany, wyprodukowany i wprowadzony na rynek zgodnie z następującymi dyrektywami: has been designed, manufactured and placed on the market in conformity with directives:

Rozporządzenie Parlamentu Europejskiego 305/2011 / Regulation of the European Parliament 305/2011 Dyrektywa ErP 2009/125/WE / Directive ErP 2009/125/EC Rozporządzenie Delegowane Komisji (UE) 2015/1186 / Commission Delegated Regulations (EU) 2015/1186 Rozporządzenie Komisji (UE) 2015/1185 / Commission Regulation (EU) 2015/1185

i niżej wymienionymi normami zharmonizowanymi:

and that the following relevant Standards:

PN-EN 13240:2008

dokumentacja techniczna / technical documentation

Wyrób oznaczono znakiem: Product has been marked:

CE

Ta deklaracja zgodności traci swą ważność, jeżeli w piecu wolnostojącym DEFRO HOME IGNIS wprowadzono zmiany, został przebudowany bez naszej zgody lub jest użytkowany niezgodnie z instrukcją obsługi. Niniejsza deklaracja musi być przekazana wraz z piecem wolnostojącym w przypadku odstąpienia własności innej osobie.

This Declaration of Conformity becomes invalid if any changes have been made to the DEFRO HOME IGNIS Dry Stove, if its construction has been changed without our permission or if the dry stove is used not in accordance with the operating manual. This Declaration shall be handed over to a new owner along with the title of ownership of the dry stove.

Wolnostojący ogrzewacz na drewno DEFRO HOME IGNIS jest wykonywany zgodnie z dokumentacją techniczną przechowywaną przez: DEFRO HOME IGNIS Wood heating stove has been manufactured according to technical documentation kept by: DEFRO R. Dear Customer,

We would like to inform you that we make every effort to offer the products of quality fulfilling the most restrictive standards and warranting operational safety. All the devices are produced in accordance with the requirements of relevant EU directives and have CE safety mark confirmed by the Declaration of Conformity EC.

CE

We appreciate all your comments and proposals regarding our level of service. We appreciate your comments and proposals regarding our devices and the level of service provided by our Partners and Technical Support and Service.

DEFRO R. Dziubeła sp.k.

Dear Customer,

We would like to thank you for choosing the high-quality DEFRO product which will ensure your safety and operational reliability.

As our customers, you can always count on the help of the DEFRO Service Centre, which is ready to ensure the continuous efficiency of your equipment.

Please note that in order to use the equipment safely and efficiently, it is crucial to get familiar with the following directions.

- Read and follow this Operating Manual useful remarks concerning the proper operation of the equipment can be found there.
- Determine if all parts have been delivered or if the fireplace was not damaged during transport.
- Check the data on the rating plate against the warranty card.
- Prior to starting the device, check the flue connection against connection recommendations included in this manual and appropriate national regulations.

Basic usage rules are to be obeyed while using the equipment. Do not open the doors during the operation of the device.

DEFRO Service Centre or Authorized DEFRO Service should be always contacted when any intervention is necessary because only these parties have original spare parts and are properly trained within the scope of installation and operation of DEFRO equipment.

For your safety and equipment use convenience please get acquainted with this operating manual and send back a correctly filled copy of the Warranty Card to the following address:

$\equiv \square$	DEFRO R. Dziubeła sp.k Service Centre
	Ruda Strawczyńska 103a
	26-067 Strawczyn

Serwis@defro.pl

By sending back your Warranty Card, you will be registered in our DE-FRO products users' database and we will be able to provide you with quick and professional technical support.

If you do not send back a correctly filled in Warranty Card and the equipment quality and completeness receipt within the period of up to two weeks after the date of installation but no longer than within six months, after purchasing, **the warranty will become invalid!** This results in delays with repairs and the necessity of **covering costs** of service and travelling expenses.

Thank you for understanding. Yours sincerely,

DEFRO R. Dziubeła sp.k.

1. INFORMATION

The operating manual is an integral and essential part of the product and must be forwarded to the user also in case when the product is handed over. Users should carefully read the manual and save it for the future because all remarks included there are important guidelines concerning safety during installation, usage and maintenance.

Installation of the stove must be carried out in accordance with the mandatory standards in the country of destination, according to the guidelines of the manufacturer and by qualified personnel. Improper installation of the device may be a reason for personal injuries and damage to property for which the manufacturer is not liable.

The dry stove can be used only for the purpose it was explicitly intended for. Any other use should be treated as inappropriate and in consequence as dangerous.

In the case of error during installation, usage or maintenance works caused by non-observance of the legislation, applicable regulations or instructions contained in this manual (or others, delivered by the manufacturer) the manufacturer rejects any contractual or non-contractual liability for resulting damages and the warranty for the device becomes void.

All illustrations, pictures and photos are only indicative.

Versions of the publication

Due to the continuous improvement of the product, DEFRO reserves the right to update this publication without prior notice.

The content of this Operating Manual is a property of DEFRO. Any copying, duplicating, publishing of content of this User's Manual without the prior written consent of DEFRO is forbidden.

Manual storage and browsing of its contents

We recommend taking care of this manual and storing it in an easily and quickly available location. If this manual has been lost, damaged or destroyed you should request a copy in the sales outlet or directly from the Manufacturer providing identification data of the product. All the most important information included in the operating manual is marked with "bold" and has symbols pointing out the user's attention to hazards that can be present during the operation of the dry stove. The symbols used in the text are explained below:

may result in death or major injuries.

Danger! A direct threat to life and health! Non-compliance with

STOP

Danger!

Danger from electrical voltage! Incorrect installation and incorrect electrical connections may cause danger to life by electric shock.

the recommendations marked in this way and misuse

Note!

A warning symbol indicating that you should read carefully and understand the given information, to which it relates. Non-compliance with these recommendations may result in major damage to the equipment and create a hazard for the user or the environment.

Danger!

A direct threat to health! Non-compliance with the recommendations distinguished in this way may cause a fire or burns.

Hint!

Informative symbol. Useful information and hints are marked in this way.

2. BASIC SAFETY RULES

2.1. SAFETY WARNINGS

The national and local provisions should be met.

- The equipment should be installed in compliance with the legal standards applicable in the given location, region or country.
- The equipment should be used by persons (including children) of impaired physical, sensory, and mental capabilities and by persons without experience and required knowledge provided that such operation is not carried out under their supervision or after proper instruction by a person responsible for their safety.
- You should always observe the guidelines given in the operating manual to ensure the correct use of the equipment and to prevent accidents.
- Operation and adjustment should be carried out by adults. Errors and incorrect settings can cause hazardous situations and/or incorrect operation.
- Prior to any operations the user (or any person operating the equipment) should read and understand the whole contents of this manual.
- Equipment should be used only as intended. Each other use is considered as misuse and hazardous as a consequence.
- The equipment should not be used as a ladder or object to lean against.
- Prior to installation, you should make sure that the substrate will resist the force of the equipment considering its weight.
- In the case of disturbances in operation, the equipment can be restarted only when the occurred problem has been removed and the equipment is brought back to its original condition.
- The user is fully responsible for misuse of the product and relieves DEFRO from any civil and criminal liability.
- All types of modifications or replacement of equipment parts with non-original components or without authorization may present a risk for the operator and relieves DEFRO from any civil and criminal liability.
- Incorrect installation or maintenance (incompatible with the contents of this manual), can cause injuries to people, animals or property damage. Then DEFRO shall be relieved of any civil or criminal liability.

- Part of the equipment surface is very hot (doors, handle, window panel, flue gas discharge pipe, etc.). You should avoid direct contact with such components without suitable protective clothing or protective equipment such as e.g. heat-resistant gloves.
- Do not touch the window panel after heating up of the equipment.
- Keep children away from the equipment when it is operating because each hot surface can cause burns.
- It is forbidden to start-up the equipment when the doors are opened or the window panel is cracked.
- Do not place and dry the underwear on the equipment. Possible dryers for hanging underwear or similar should be located at an adequate distance from the equipment - fire hazard.
- It is absolutely forbidden to open the doors if the flue is on fire. Then call the appropriate services.
- It is recommended to keep a 400 mm distance between the hot parts of the equipment and medium inflammable materials; otherwise, use commercially available insulation materials. Apply this hint also for

furniture, curtains etc. Minimum distances are given in point 5.2 of the operating manual.

- It is absolutely forbidden to use flammable liquid for equipment firing up.
- If the substrate, on which the equipment is located, is made of inflammable materials, such as parquet or floor lining then you should place a protective plate under it (the plate should protrude 250-300 mm from the front of the equipment).

2.2. WARNINGS RELATED TO OPERATION

 Equipment should be shutdown in case of failure or incorrect operation.

- Fuel used in the equipment should meet the conditions described in this manual.
- Internal parts of the equipment should not be washed with water.
- Avoid contact with water; above all do not wash any painted surfaces until they are fully cured. The coating on new devices is not an anti-corrosion coating; heatresistant paint achieves its protective properties only after curing under the influence of heat (after several ignitions).
- Do not expose the body to the action of hot air for a long period of time. Do not heat excessively the room where you are staying and where the equipment is installed. It may have an adverse impact on physical condition and be a reason for health problems.
- Equipment should be installed in rooms with fire protection and equipped with all required components such as supply (with air) and flue gas discharge.
- Equipment and cladding made of ceramics should be stored in rooms free from moisture and they cannot be exposed to adverse effects of the weather.
- It is not recommended to place the body of the equipment directly on the floor and if the floor is made of inflammable materials it should be properly insulated.
- To facilitate possible interventions by the technical personnel you should not place the equipment inside the closed rooms and just by the walls which can also disturb air intake.
- Always make sure and check whether the doors of the combustion chamber are tightly closed when the equipment is operating.
- Equipment consumes the exact amount of air that is required for the combustion process; it is recommended to connect the equipment for air intake from outside using a suitable pipe and through a special outlet located at the back of the equipment.

ADDITIONAL INFORMATION

- You should contact the sales outlet or qualified personnel authorized by DEFRO in the case of any problems. Request original spare parts if the repair is necessary.
- Use only fuel with properties compatible with the recommendations of this operating manual.
- Check and clean flue gas discharge ducts (connecting piece to flue) periodically.
- Store this manual carefully because it should be available for a whole period of equipment operation. In the case of sale or giving the equipment to the other user you should always make sure whether the product has the manual enclosed.
- Request a new copy from the authorized sales outlet in the DEFRO company if it has been lost.

3. INTENDED USE

Dry stoves are intended for the combustion of wood from deciduous trees. They are intended for heating houses and spaces where they are installed. They can be also used as an additional source of thermal power. The dry stove can be connected multiple times.

The IGNIS series stoves are available in several versions that are equipped with various housings of the same combustion chamber.

4. TECHNICAL SPECIFICATION

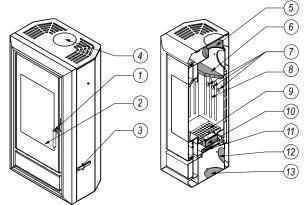

4.1. DESIGN

A dry stove operates as a heater for the room in which it is installed. Hot air is emitted directly from the furnace through the window panel and by radiation through convection holes in the upper wall of the device.

The body of the dry stove - walls in contact with fire - is made of steel sheet and the furnace chamber is lined with ceramic cladding. The body is lined with panels made of steel sheets covered with powder paint.

Air for the combustion process is supplied through the air inlet (intake) located at the rear or bottom of the equipment.

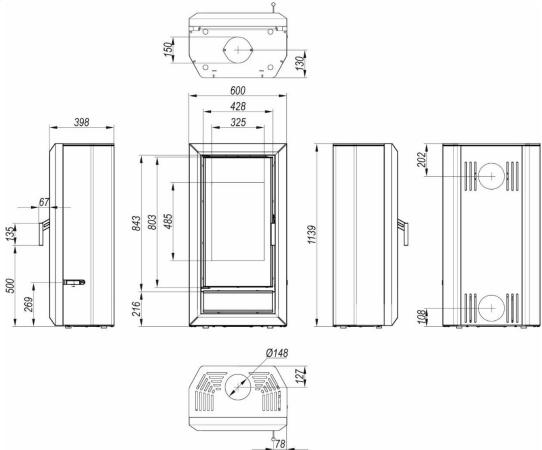

The socket for flue gas discharge is located in the upper wall of the stove.

Picture 1. DEFRO HOME IGNIS dry stove design.

4.3. EQUIPMENT

The dry stove is delivered on a pallet, foil-wrapped and fully assembled. The scope of delivery can include additional components and subassemblies, according to the order of the user. Components that are standard equipment are specified in table 3.

Table 3. Dry stove equipment.

Standard equipment of dry stove	unit	Quan- tity
Dry stove user's manual	pcs.	1
Ceramic lining of furnace chamber	set	1
Masking plug for top socket of the flue	pcs.	1
Connecting screwed joint 124 mm for rear air inlet	pcs.	1
DH sponge	pcs.	1

4.4. FUEL PARAMETERS

A dry stove is intended for the combustion of wood from deciduous trees (oak, hornbeam, ash, beech) with moisture content below 20% (wood seasoned in proper conditions for at least 2 years). The maximum length of chunks of wood is 300 mm.

It is not allowed to use wet wood (extensive contamination of fireplace and soot emission and decrease of energy efficiency of the stove).

It is forbidden to use all other fuels, min. coal, softwood from coniferous trees, wood from tropical trees and any liquid fuels.

It is forbidden to combust all types of litter and wood waste. Firing with inadmissible materials in the fireplace may result in damage to the fireplace and life and health hazard to the users (toxic flue gas from chemicals).

Use of bad quality fuel or incompatible with the abovementioned recommendations would cause irregularities in the operation of the equipment and can lead to loss of warranty and decline of the liability for the product.

A dry stove is not intended for the combustion of wastes and forbidden fuels cannot be combusted in it.

Wood should be seasoned minimum of two (2) years. Firing with wet wood, with low calorific value, decreases the efficiency and has an adverse influence on the dry stove's lifetime.

It is not recommended to use softwood and resinous woods as fuel. It causes intensive smoke concentration and the necessity to clean the equipment and flue more often.

It is forbidden to combust coal, wood from tropical trees, chemical products, liquid fuels etc., e.g. oil, alcohol, petrol, naphthaline, laminated, impregnated boards etc., paper, cardboard, old clothes, wastes.

It is forbidden to exceed the recommended amount of charged fuel, because it may cause overheating of the equipment.

DEFRO R. Dziubeła sp.k. does not accept liability for damages caused or improper burning of fuel if the fuel used is prohibited.

4.5. SPARE PARTS

To obtain information on the availability of spare parts for the dry stove or inquiries about equipment servicing please contact with DE-FRO Service Center or Authorized DEFRO Service.

□ DEFRO R. Dziubeła sp.k. Service Centre Ruda Strawczyńska 103a 26-067 Strawczyn	Ne	serwis@defro.pl
---	----	-----------------

5. TRANSPORT AND INSTALLATION

5.1. TRANSPORT AND STORAGE

The dry stove is delivered on a pallet, foil-wrapped and fully assembled. It is recommended to transport the dry stove, in such packing condition, as close as the possible target location for installation, which will minimize the possibility of damage to the device housing.

All remaining parts of the packing should be removed in such a way that it will not pose any hazard to people and animals.

Appropriate lifts are to be used for lifting and lowering the dry stove. For transport, the dry stove is to be secured against moving and tilting on a vehicle's platform by means of belts, wedges and wooden blocks.

The dry stove is to be transported in a vertical position!

The dry stove is to be stored in a non-heated room, under a roof and with efficient ventilation.

Prior to installation, it should be determined if all parts have been delivered and if they are in good technical condition.

5.2. WORKING ENVIRONMENT

The dry stove should be installed in compliance with the requirements of the currently applicable standards and legal regulations and detailed regulations of the target country. In Poland, these conditions are regulated by the Regulation of the Minister of Infrastructure of 12 April 2002 on technical conditions which should be fulfilled by buildings and their location. (Journal of Laws no. 75 of 2002 item 690 as amended) and Polish Standard PN-EN 13240:2008 Roomheaters fired by solid fuel. Requirements and tests.

The dry stove should be installed in a suitable location allowing the opening of the doors and carrying out regular maintenance works. The environment should be:

- adapted to operating conditions,
- equipped with a power supply of 230V/50Hz,
- equipped with a suitable flue gas exhaust system,
- equipped with an external ventilation system,
- equipped with an earthing system with a CE certificate.

The correct setting of the stove is necessary to obtain a satisfactory heating level for the residential unit. Prior to assembly, it is necessary to select a suitable position for stove installation. Check minimum safe distances from materials susceptible to heat or inflammable materials such as load-bearing walls and other walls or wooden components, furniture etc.

Installation of the dry stove should observe the following safety rules:

- a minimum distance of 200 mm from the side and rear of the medium inflammable materials,
- a minimum distance of 800 mm from the front wall, where the medium inflammable materials cannot be located.
- objects made of highly inflammable materials should be located at a distance minimum of 2000 mm from the furnace

If it is not possible to maintain the above-indicated distances then you should apply process and building measures to avoid fire hazards. In the case of contact with a wooden wall or wall made of other inflammable material, it is appropriate to insulate the flue gas discharge pipe.

In the case of a floor made of inflammable materials, it is appropriate to prepare a plane protecting the floor and execute protection in accordance with the standards applicable in the given country.

The dry stove should be located on a substrate with suitable loadbearing capacity. In accordance with Polish Standards, each square meter of the floor slab in the single-family building should transfer a load of 150 kg. If this condition is fulfilled the dry stove manufactured by DEFRO can be installed without needing to reinforce the floor slab.

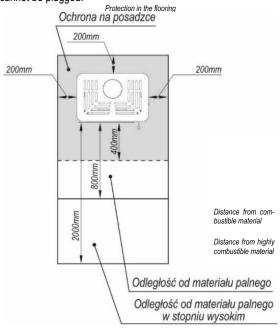

Nonetheless, if you are not sure about the design of the floor slab, where the stove is to be installed, you should absolutely contact with the building designer to reinforce the floor slab or execute a special structure distributing the weight on a larger area.

The flooring in the room, where the stove is to be installed, should be properly dimensioned, to maintain the load.

To ensure the correct operation of the dry stove you should ensure the suitable inflow of air required for combustion (it is appropriate to ensure approx. 40 m³/h) in accordance with the installation standards and standards applicable in the given country. The volume of the surrounding environment should not be less than 30 m³. You should assume that the combustion of 1 kg of wood requires ~8 m³ of air.

Air should be supplied through fixed openings of a minimum 100 cm² cross-section made in the walls (near the equipment) and directed to the outside. These openings should be made in a way ensuring that they cannot be plugged.

Picture 17. Minimum safe distances during the setting of the dry stove.

Air can be supplied from adjacent rooms, provided that they are equipped with an external air supply and they are not intended for a bedroom and bathroom, and where fire hazard is not present, for example: garages, woodsheds, inflammable materials storage. You should absolutely observe recommendations of the applicable standards.

It is forbidden to install dry stoves in bedrooms, bathrooms and other rooms where other heating equipments without independent air inflow are installed (fireplace, stove, etc.).

It is also forbidden to set a dry stove in explosive atmospheres.

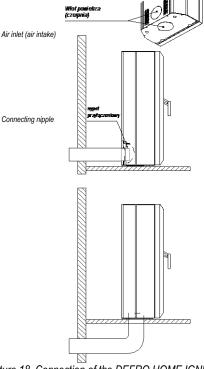

5.3. CONNECTION TO EXTERNAL AIR INTAKE

The room, where the dry stove is installed, should be equipped with the inflow of air in the minimum amount required for the correct combustion process and for room ventilation. This can be done by executing fixed vents in the wall directed to the outside or through independent or common ventilation ducts.

The external wall near the equipment should have a through opening with a free cross-section of 100 cm^2 (opening with 12 cm in diameter or square 10 x 10 cm), protected with grille on the internal and external sides, for this purpose. Furthermore, the air intake should be:

- directly connected to the room, where the dry stove is to be installed,
- protected with grille, metal net or suitable cover not restricting minimum cross-section,
- located in a way preventing plugging it,
- located with consideration of proper distances preventing swirling of air (e.g. with respect to the windows).

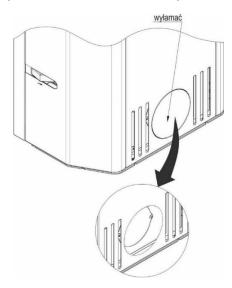

The DEFRO HOME IGNIS series heating stoves offer two versions of connection of the external air inlet: from the back or bottom of the stove. LOG (SOLUM LOG, ORBIS LOG, DEA LOG) versions, equipped with a recess for wood, have only one inlet located below the furnace and they are not intended for air intake from the outside.

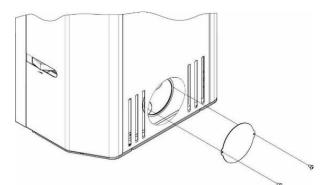

Picture 18. Connection of the DEFRO HOME IGNIS stove to the external air inlet.

5.3.1. CONNECTION ON THE BACK OF THE EQUIPMENT

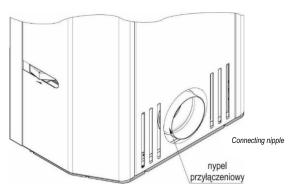

Not applicable to DEFRO HOME IGNIS series stoves in the LOG (SOLUM LOG, ORBIS LOG, DEA LOG) version.

1. Carefully break the blanking plug

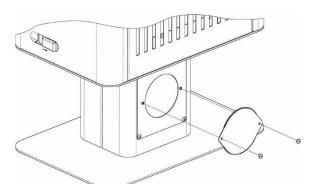

2. Unscrew the bolts fixing the cover

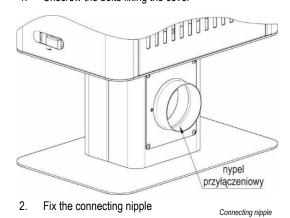

3. Fix the connecting nipple

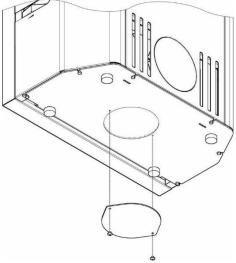

Connection on the back of the equipment - version on the foot

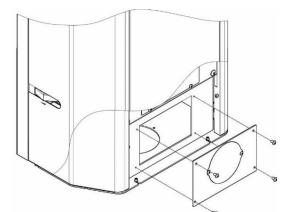

1. Unscrew the bolts fixing the cover

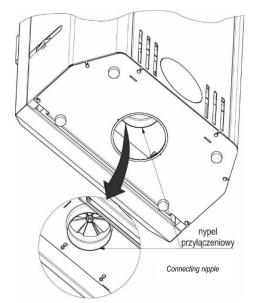

5.3.2. CONNECTION FROM THE BOTTOM OF THE EQUIPMENT

1. Unscrew the bolts fixing the cover

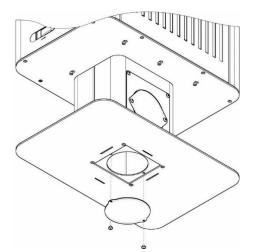

2. Unscrew the bolts fixing the cleanout opening

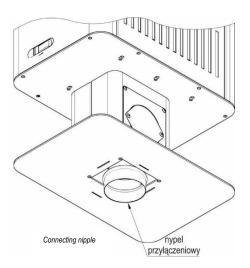

3. Fix the connecting nipple below the furnace

Connection from the bottom of the equipment - version on the foot

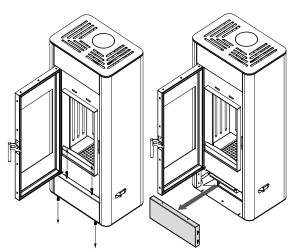

1. Unscrew the bolts fixing the cover

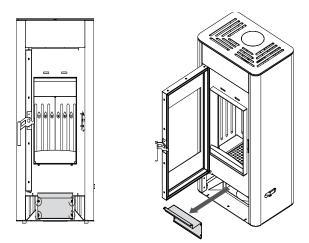

2. Fix the connecting nipple below the furnace

5.3.3. CONNECTION DIRECTLY TO THE FURNACE

The SOLUM furnace is equipped with a cleanout opening allowing connecting the air duct directly to the opening supplying the air under the furnace (air control).

 Remove two upper screws and loosen two bottom screws fixing the body under the doors after the opening of the doors. Then remove the body towards yourself.

2. Remove four wing nuts fixing the cover of the cleanout of the air chamber and then take the cover out.

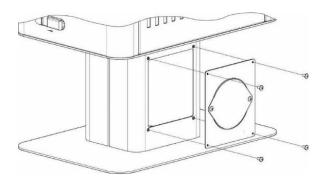

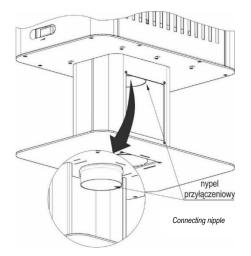

3. Using the cleanout opening it is possible to fix the air duct to the inlet opening of the air controller (Φ 124).

The SOLUM TOP, ORBIS TOP and DEA TOP stoves allow connecting the nipple directly to the furnace from the back of the foot, as shown in the below pictures

NOTE: The pipe can be lead from the bottom of the equipment in this version

1. Unscrew the bolts fixing the cleanout opening

2. Fix the connecting nipple below the furnace

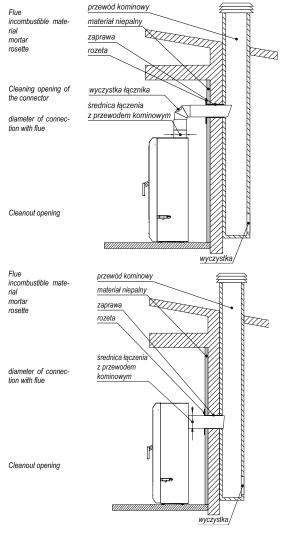

5.4. INSTALLATION TO THE FLUE

The dry stove should be connected to an individual flue. Size of the chimney draught should equal:

•	minimum draught	-	6 ± 1 Pa,
---	-----------------	---	-----------

- medium, recommended draught 12 ± 2 Pa,
- maximum draught 15 ± 2 Pa.

During the execution of the opening for the flue gas discharge pipe, you should consider the possible occurrence of inflammable materials. If the opening will pass through the wooden wall or wall made of material sensitive to heat then you should obligatorily maintain the minimum distance from flammable material (value given on the certification label of the pipe), with possible additional insulation using proper materials (thickness 1.3 - 5 cm, heat conductivity min. 0.07 W/m °K).

Picture 19. Option to connect the DEFRO HOME IGNIS stove to the flue.

As an alternative it is recommended to use insulated industrial pipe, which can be also used outdoors, to avoid the occurrence of condensate.

For correct operation connector between the dry stove and flue or smoke duct should be executed acc. to the below recommendations:

- horizontal sections should have a minimum slope of 3% towards the top,
- length of the horizontal section should be minimum and should not exceed 2/3 metre,
- a number of changes of directions, inclusive of the use of the "T" component, should not exceed 4.

Chimney or individual smoke duct should meet the following requirements:

- be resistant to combustion products, water-proof and suitably insulated, in compliance with conditions of use,
- be made of materials resistant to normal mechanical stresses, heat, the action of combustion products and possible condensate,
- be vertical with the change of axis direction not exceeding 45°,

- be adequately separated with void space or suitable insulation from combusted and inflammable materials,
- have preferably circular internal cross-section: square or rectangular cross-section should have rounded corners with a radius not smaller than 20 mm,
- internal cross-section should be constant, free and independent,
- have a rectangular cross-section with a maximum ratio between two sides equal to 1.5.

It is forbidden to use mechanical exhaust ventilation. The dry stove should not be used if the chimney draught is too low.

The stove offers two locations of flue gas outlet socket: on the top or rear wall of the stove. The stove is delivered from a factory with a socket installed on the top wall. The change of its location is described in chapter 7.3.4.

6. USAGE AND OPERATION

6.1. INTRODUCTORY REMARKS

Do not touch the stove during the first firing-up, because the paint is hardening during this stage.

Touching the paint could result in uncovering of the steel surface.

It is possible to refresh it using spray paint of the same color if necessary.

It is a good practice to ensure efficient ventilation during the first firing-up because small amounts of smoke and paint odour will be emitted from the stove.

Do not stay near the stove. It is required to vent the room. Smoke and paint odour will disappear after approx. one hour of operation. However, we remind you that they are not harmful to health.

The stove is subject to expansion and shrinkage during the warming and cooling down stage which may cause slight squeaks. This is an absolutely normal phenomenon because the structure of the equipment is made of rolled steel and this phenomenon shall not be considered a defect.

It is very important to avoid excessive overheating of the stove at the beginning but to reach the required temperature gradually. Use low heating powers. During the next firing-up of the stove, it will be possible to use the whole available thermal power. This will avoid damage to ceramic tiles, welds and steel structures.

Do not expect the immediate effects of heating!

6.2. FIRST START-UP AND OPERATION

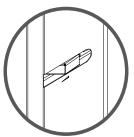

Only the <u>AUTHORIZED SERVICE of the MANUFAC-TURER</u> may check the correctness and integrity of the equipment connection, preparation for operation according with this manual and applicable regulation and first start-up and train the user within the scope of equipment operation and servicing.

Firing from the top is a recommended method of the firing of the dry stoves. Before firing up you should set a slider of air inflow adjustment to the maximum opening by pressing its rear half. Then open the doors of the stove and place fuel on the grate as follows: place split thick chunks at the bottom, then another layer of thinner chunks. Place small slivers at the top, where you may additionally place eco-friendly kindling.

It is important to ensure free space (approx. 1 cm) between each of the chunks.

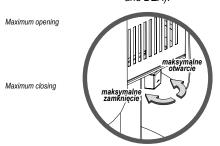

The recommended single fuel charge is given in table 1.

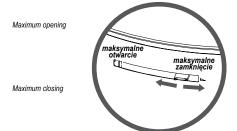

Picture 20. Setting the air inflow adjustment button in the maximum closing position (applies to DEFRO HOME IGNIS, SOLUM, ORBIS and DEA).

Picture 21. Setting the air inflow adjustment button in the maximum opening position (applies to DEFRO HOME IGNIS, SOLUM, ORBIS and DEA).

Picture 22. Adjustment of air inflow in DEFRO HOME OVAL stove.

Picture 23. Adjustment of air inflow in DEFRO HOME ORTI stove.

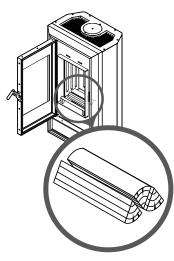

It is forbidden to use other materials than described in this manual for firing up, in particular flammable chemicals such as: oil, petrol, solvents and others.

You should use only hardwood (recommended beech, oak, hornbeam, birch), preferably debarked, of low moisture content (below 20%).

During combustion, the doors should be opened only when the fuel is being added. Recharging should be made only when only an ignition layer, in the form of a glow, remains in the furnace. Before adding the wood, it is required to spread the remaining layer of glow and refill the combustion chamber with wood - in accordance with picture 24. The intensity of the combustion process should be set with the "air inflow adjustment slider". The correct flame should have a light-yellow colour and a length of approx. 20-40 cm, depending on the power of the boiler,

after approx. 2-3 minutes from charging. If there are problems obtaining the correct flame in a short time - you should increase the opening of a flow damper and set the target position after firing up.

Picture 24. Method of fuel arrangement

Never stand in front of the stove door while opening it. Burn risk.

Pay special attention to avoid damage to the ceramics during refuelling.

Odour of paint from the body will be released during the first several hours of combustion. This is completely normal. You should strongly vent the room at that time. Check the tightness of joints once again when fuel is completely burned out and equipment has been cooled down.

Housing components will be very hot during operation. You must exercise caution.

Empty the ash drawer prior to each successive start-up of the equipment. Remove the grate, then the ash drawer using the handles, and remove the remaining dust. The window panel should also be cleaned. Do not use sharp materials. It will damage the surface of the window panel and screen printing.

6.3. DAMPING

Damping is executed by the closing inflow of primary air. In such a case you should wait until the fuel completely burns out in a natural way.

If it is necessary to quickly damp a flame you should charge the furnace chamber with dry sand or ash. It is not allowed to damp a flame by pouring it with water because it may damage components of the equipment.

After a longer break in the equipment's operation, you should check the flow capacity of the flue.

7. CLEANING AND MAINTENANCE

All operations related to cleaning of all components should be carried out when the stove is completely cold. It is required to use protective gloves.

It is forbidden to clean the equipment (all painted components and gaskets) using chemicals, liquids and moist cloths, towels, industrial wipers etc. Discolourations, sources of corrosion may occur if the mentioned rules are not observed and they are not covered by the warrantv.

It is a good practice to ensure good ventilation in the room during the cleaning of the fireplace.

7.1. BASIC OPERATIONS AND CLEANING BY THE USER.

Any service and maintenance works are to be carried out with meticulous care and only by adults familiarized with this manual. The dry stove should not be cleaned in the presence of children.

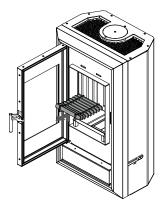

Any service and maintenance works are to be carried out with meticulous care and only by adults familiarized with this manual. The dry stove should not be cleaned in the presence of children.

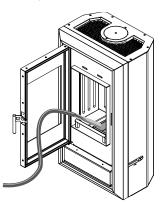

7.1.1. CLEANING BEFORE EACH STARTING

Prior to every successive start-up of the equipment the ash container should be cleaned and emptied, handling the ash with due care. Remove the grate, then the ash container using the handles, and remove the remaining dust. Dust can be removed using a vacuum cleaner only if it is completely cold. Use a vacuum cleaner adapted to removing particles of a specified size for this purpose.

Re-install the ash container below the grate after the cleaning, making sure that its position is correct.

1. Lift and remove the grate from the stove.

2. Remove and clean the ash-pan e.g. using a vacuum cleaner.

7.1.2. WINDOW PANEL CLEANING

The window panel may be cleaned only and exclusively when the equipment does not operate and is at room temperature.

Before each cleaning of the glass pane, it is required to protect the painted components and surfaces, and gaskets against flooding, because it has an impact on quicker wear and tear of the components.

We recommend using only the DH sponge to clean the glass panes. We do not recommend using any liquid for cleaning of glass panes or chemicals. The absence of protection of the cords surrounding the glass panes causes loss of their properties, soaking with chemicals and reactions with high temperature that results in damage to the glass pane. The sponge is intended only to clean the glass panes, it should not be used for gaskets or metal parts. It is not suitable for cleaning glass panes with pyrolysis. The sponge may be used several times, depending on the degree of soiling of the glass pane. Use the grey side for cleaning and brush it off each time after use.

Do not use products that may scratch the glass pane. The ash may contain substances that will scratch the glass ceramics.

It is forbidden to use abrasive agents or materials, because they may scratch the glass surface.

It is forbidden to use chemical cleaning agents, because in case of contact with such agents, they may cause damage to the components of the stove, that is printed on the glass pane, glass pane, gaskets, painted surfaces.

Do not open doors to clean the window panel during the operation of the stove. Cleaning of window panels is possible only when the equipment is cold.

7.1.3. DOORS/GASKETS

Abrasive surfaces of doors and closing mechanisms should be occasionally lubricated with graphite grease. Carry out inspection and cleaning of the whole stove prior to each heating season. Pay special attention to the condition of gaskets, and replace them if necessary.

7.1.4. FURNACE CHAMBER

Clean the furnace chamber of the equipment periodically, depending on moisture content and type of wood used.

7.1.5. FLUE

In compliance with applicable regulations, you should clean the flue twice (2) a year. Flue should be cleaned by a chimney sweep company and this fact should be documented in this manual.

Flue gases coming out of the blocked chimney are dangerous. The chimney and connector should be kept clean. They should be cleaned before each heating season.

After a longer break in the equipment's operation, you should check the flow capacity of the flue.

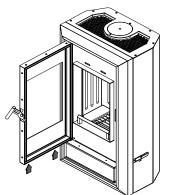

7.2. PERIODIC INSPECTION BY AUTHORIZED SERVICE

After the heating season, it is necessary to clean the chamber through which flue gas is flowing. This cleaning is obligatory and is intended to remove all combustion residues.

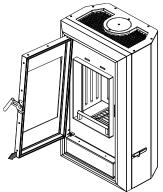

Periodic inspection of the equipment should be carried out only by a qualified manufacturer's service.

- 7.3. DISMANTLING OF COMPONENTS
- 7.3.1. DOORS DISASSEMBLY

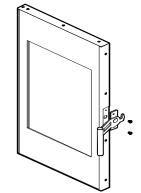

1. Open the doors and lift them fully upwards position to remove the bottom pin of the hinge from the sleeve.

 Slide the bottom edge of the doors to the outside to position the bottom pin of the hinge outside the sleeve. Remove doors in such a position

7.3.2. WINDOW PANEL DISMANTLING

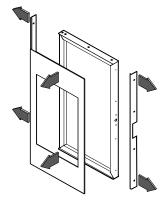

It is possible to disassemble the window panel after the doors have been disassembled. The best way is to disassemble the window panel when the doors are in a horizontal position (e.g. when such doors lie on the table).

3. Unscrew fixing bolts and disassemble the handle

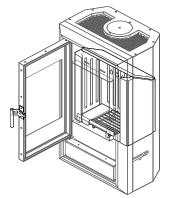

4. Unscrew bolts fixing the side strips.

5. Disassemble the fixing strips and remove the window panel.

7.3.3. DISASSEMBLY OF FURNACE CLADDINGS

1. Open the doors. First, you should disassemble the deflector.

2. Lift one side of the deflector and then lift the whole deflector upwards in such a position. Slide it slightly to the left or right to place it in free space between the side panels.

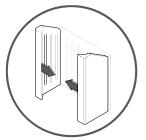

3. Lower the deflector in such a position and remove it through the door opening.

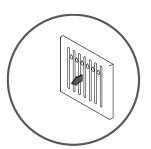

4. Lift and remove the grate.

5. Remove plates located on the sides of the grate

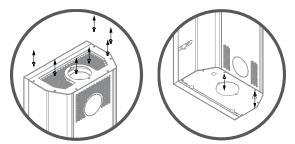

6. Remove both vertical plates located on the side walls of the furnace.

7. At last, remove the plate located on the rear wall.

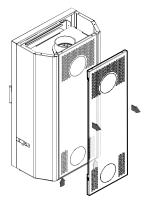

7.3.4. CHANGE OF POSITION OF FLUE GAS OUTLET SOCKET

The flue gas outlet socket is factory installed on the top wall of the furnace with a vertical outlet from the flue. It is possible to change the position of the socket and to install it on the rear wall to ensure that the flue goes out from the stove in the horizontal direction.

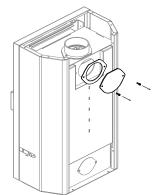

1. Undo all screws fixing the top cover and loosen two bolts fixing the rear cover to the base. Remove the top cover of the furnace.

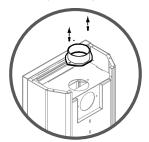

In the newest production batches, the upper lid is not screwed, you can just lift it up. When it has been taken off you should remove the screws fixing the rear body of the stove.

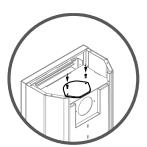

2. Lift the rear cover to the top and slide out with horizontal movement to the outside.

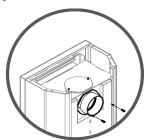

3. Unscrew the plug of the flue gas socket located on the rear wall. Remove the plug with the gasket.

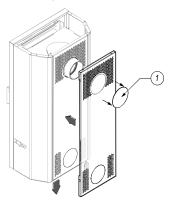

4. Remove the fixing screw holding a steel deflector through the opening in the rear wall. Remove the flue gas outlet socket with a gasket and lay the released flue's deflector inside the furnace on a deflector made of vermiculite.

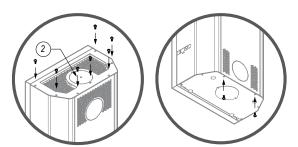

5. Plug with gasket should be placed on the top wall. All corresponding mounting holes should be matched. Lift the flue deflector and tighten the plug with the gasket to the steel deflector using screws.

 Move the flue gas outlet with a gasket to the rear wall of the furnace in a way ensuring that shearing is located on the top; Tighten screws fixing the socket.

7. Gently break off the plug (1) in the rear cover of the furnace and then slide the cover into its place.

 Tighten bolts fixing the rear cover to the furnace base. Tighten the masking frame (2) of the top socket of the flue to the top cover and then install the whole cover using the remaining bolts.

7.4. SHUTTING THE STOVE DOWN

It is recommended completely shutdown the stove and clean the equipment when each heating season is finished.

8. TROUBLESHOOTING

Some anomalies indicating irregularities in operation can occur during the operation of the equipment. It can be caused by incorrect installation of the equipment without observation of the applicable building regulations or provisions of this manual or by external causes e.g. natural environment.

Below you will find the most frequent causes of incorrect operation of the equipment with their solutions.

Smoke draw back when the doors are opened:

- too rapid opening of the doors (open the doors slowly);
- if the chimney damper has been installed as a chimney draught regulator - open the chimney damper each time when the doors are opened;
- insufficient air inflow to the room, where the equipment is installed (ensure proper ventilation in the room or supply air to the combustion chamber in compliance with guidelines in the manual);
- atmospheric conditions: low pressure, mists and precipitation, sharp changes in temperature;
- insufficient chimney draught (carry out chimney sweep inspection of the flue).

Insufficient heating or damping:

- too low amount of fuel in a furnace (charge furnace in compliance with the manual);
- the too high moisture content of wood used for combustion (use wood with moisture content <20%) a large part of obtained energy lost in the water evaporation process:
- too low chimney draught (carry out chimneysweep inspection of the flue).

Insufficient heating despite good combustion in the combustion chamber:

- low calorific "soft" wood (use wood as recommended in the manual);
- too high moisture content of wood used for combustion (use wood with moisture content <20%);
- too fragmented wood, too thick chunks of wood:

Excessive contamination of window panel:

- the low intensity of combustion (combustion with a very small flame, use only dry wood as fuel);
- using resinous softwood as a fuel (use dry hardwood as a fuel foreseen in the stove operating manual).

The correct operation can be disturbed by atmospheric conditions (air moisture content, fog, wind, atmospheric pressure) and sometimes by closely located high facilities.

In case of repeated problems, you should turn to a chimneysweep company to confirm the reason for such a condition and to indicate the best solution for the problem.

9. MEASURES IN THE CASE OF FIRE IN THE FLUE /SOOT IGNI-TION/.

Systematic cleaning of smoke ducts should be performed to prevent soot ignition in the chimney.

Soot ignition in the chimney is the burning of particles deposited inside chimney (flue) channels; the deposits are formed in the course of the heating equipment's operation and were not cleaned by chimney sweeps. In the case of a soot fire in the chimney the following recommendations should be observed:

- call Fire Brigade at 998 or 112, give information about what is happening and give detailed directions what is happening and how to get to the given building;
- damp a fire in the chimney by closing the inflow of cold air to the furnace chamber;
- close the stove's door and cleaning holes tightly to cut off the air supply (due to lack of air the fire will eventually stop);
- check the whole chimney channel for any cracks which might result in fire spreading to the rooms;
- prepare fire quenching means, e.g. fire extinguisher, fire blanket, a hose connected to the water system, water in a container;
- make rooms and necessary information available to the Fire Brigade.

It is strictly forbidden to pour water into the chimney the risk of a blowout.

Untight chimney channels can be a source of burning sparks or very hot flue gas, including insensible carbon monoxide.

Chimneysweep should be called after a soot fire in the chimney to perform cleaning of ducts and to inspect their technical condition.

10. REMOVAL DUE TO WEAR-OUT

A dry stove is made of materials neutral to the environment. After worn out of the stove parts connected with screws should be disassembled by unscrewing and welded parts must be cut. Elements of a stove are subject to standard waste disposal, mostly as steel scrap. Take safety precautions during the disassembly of the equipment by using appropriate hand-held and mechanical devices as well as personal protective equipment (gloves, clothes, apron, glasses, etc.).

11. REMARKS ON DRY STOVE USAGE.

The following rules for the safe operation of the dry stoves should be strictly observed and introduced.

- The dry stove can be used only by adults, who have familiarised themselves with this operating manual and have been trained in the scope of usage.
- 2) It is forbidden for children to be in the neighbourhood of the stove without adults.
- Flammable liquids must not be used for torching the fuel; only solid fuel (e.g. tourist), paper can be used etc.
- Flammable materials must not be placed on the stove and in its vicinity.
- 5) It is forbidden to damp a fire in a furnace with water.
- 6) It is forbidden to use a stove with a cracked window panel.
- 7) You should use the fuel recommended by the manufacturer.
- 8) Never stand in front of the stove door while opening it. Burn risk.
- 9) While removing ash from the stove, flammable materials cannot be located closer than 1500 mm from the stove. Ash is to be put into heat-resistant containers with a lid.
- After the heating season has finished, the stove and smoke channel are to be precisely cleaned.
- 11) Point corrosion spots are allowed because they do not impact the correct operation of the equipment and do not reduce its performance. They may occur as a result of incorrect storage of equipment (e.g. in rooms of high moisture content).
- 12) A phenomenon of condensation of water steam condensate, may occur during operation.

12. PRODUCT WARRANTY TERMS AND CONDITIONS

- Placing warranty statement, which contents correspond to the provisions of this document, the Guarantor - manufacturer of the product - DEFRO R. Dziubeła spółka komandytowa, with seat in Ruda Strawczyńska 103 A, 26-067 Strawczyn, entered in the Register of Entrepreneurs of the National Court Register by the District Court under the number KRS 0000620901, NIP: 9591968493, REGON [National Business Registry Number]: 363378898, gives the Purchaser a warranty for the sold product on the terms and conditions specified below.
- 3) When the whole price will be paid and the product will be issued to the user also the warranty card will be issued. In the warranty card is missing the Purchaser should immediately contact the Seller to obtain this document, while its lack has no influence on the validity and period of the warranty given based on this statement, but it can have an influence on correct, timely processing of obligations resulting from this warranty by the Guarantor.
- 4) To allow Guarantor efficient operation the Purchaser should immediately after issuance of the product, send back a copy of a correctly completed Warranty Card to the address of the Guarantor (Ruda Strawczyńska 103a, 26-067 Strawczyn). The correctly filled Warranty Card has the date, stamp and signatures in designated locations.
- 5) The Purchaser receives Warranty Terms and Conditions, Warranty Card as well as Operating Manual containing conditions for equipment's usage, installation guide and parameters regarding the chimney, fuel and boiler water.
- 6) The Guarantor guarantees that the equipment works correctly provided that all conditions specified in the Operating Manual have been met, especially with respect to parameters applying to fuel, and connection to the chimney system. The warranty covers the product used in compliance with its intended use and information provided in the service manual. A guarantor is not responsible for the effect of normal wear and tear of the product which is connected with operation.
- 7) The warranty authorizations period commences on the date of issuance of the invoice that is proof of purchase for the equipment and it is:
 - a) five (5) years for the correct operation of the equipment, if the system is installed and operated as intended and in accordance with the provisions of the Operating Manual.
 - b) 2 years for claddings made of heat-resisting concrete -Ceramiton, while the warranty does not cover discolourations, a complete change of the colour or degradation of the top layer of the coating.
 - c) 1 year for the grate, deflector and gaskets of the fireplace,
 - d) six (6) months from the equipment installation for emission of unpleasant odour during operation of the equipment,
 - elements subject to wear-out are not covered by the Warranty; these include: ceramic hardened glass, screws, nuts, handles, bearings, guides, lines etc.
- 8) The Warranty is valid in the Republic of Poland.
- During the warranty period, the Guarantor ensures free-of-charge repairs of any physical defects of the product within the period of:
 - a) 14 days after the fault report, unless the repair requires the replacement of constructions elements of the product;
 - b) 30 days after the fault report, if the repair requires the replacement of constructions elements of the product;
 - c) subject to points 3 and 4 of these warranty conditions.
- 10) If, as a result of considering the warranty claim the defective product has been replaced with a new one or significant repairs have been made, then a new warranty period is applied counting from

the date of delivery of the replaced or repaired product. In case when only one part, belonging to the claimed product, is replaced then a new warranty period is applied only for this part. In other cases, the warranty period is prolonged by a period when the operation of the product was impossible due to filed claim.

- Registration of any physical fault to be repaired during the warranty period (fault registration) should be made by the Purchaser immediately after a fault has been found and no later than after 14 days.
- 12) Any fault is to be registered with the Guarantor (Ruda Strawczyńska 103a, 26-067 Strawczyn) by sending a complaint sheet contained in this operating manual, filled in and stamped by an authorized point of sale or authorized distributor. The fault registration should contain:
 - a) type, capacity, serial number, manufacturer number (the information is located on the rating plate),
 - b) date and place of purchase,
 - brief description of the damage,
 detailed address and phone number of the Purchaser.

If the following cases are complained about: incorrect combustion in the device, tar deposits, smoking through the door; the fault registration should be supplemented with a copy of a chimney sweep expertise certifying that the flue meets all requirements specified in the operating manual for a given size of equipment's capacity.

- 13) The Guarantor shall not be responsible for exceeding the periods mentioned in point 9 above or the Guarantor or its representatives will be ready to remove the defect within the date agreed with the Purchaser and will not be able to carry it out due to the reasons not attributable to the Guarantor (e.g. lack of proper access to devices, lack of energy or water, force majeure, Purchaser is not present etc.).
- 14) If the Guarantor, despite being ready to carry out the repair, will not be able to carry out the warranty repair twice because of the reasons attributable to the Purchaser then it is assumed that Purchaser had resigned from the claim included in the guarantee claim. Notification about the same defect in this mode is not possible.
- 15) The product can be replaced if the Guarantor decides it cannot be repaired.
- 16) The Guarantor does not accept liability for inappropriate choice of product with respect to the heated area (e.g. device of too low or too high power with respect to requirements). It is recommended to choose a device with cooperation with a design office or the Guarantor. The Guarantor is not liable for loss of data saved in the equipment and for economical losses and lost profits.
- 17) The guarantor will refuse realization of the Purchaser's claims resulting from this document in the case when:
 - a) will state damage or ripping of leaden seals,
 - b) identification of the product will be impossible (that is conformity of the presented product with a document describing the equipment, replaced or illegible documents),
 - c) damages resulting from incorrect transport carried out or ordered by Purchaser,
 - particular components of the equipment were willfully replaced with non-genuine, used etc., repairs outside the authorized service of the Guarantor etc.
 - e) damages are mechanical, chemical, and thermal and they are not resulting from causes in the sold product.
 - f) damages concerns wearing parts, especially: screws, nuts, handles, ceramic and sealing elements,
 - g) damages resulting from product usage inconsistently with the operating manual, that is especially when incorrect equipment operation resulting from lack of chimney draught or inappropriate power of the equipment,
 - h) Faults are not significant and do not have an impact on the use value of the product.
- 18) This warranty does not cover:
 - a) products used for business purposes or industrial uses;

- b) components of electrical equipment;
- c) damages caused by the other connected equipment, devices or accessories other than those recommended by the Guarantor.
- d) damages occurred as a result of the action of external impacts, among others: by the action of force majeure;
- e) damages caused by the animals,
- f) damages resulting from overheating of the equipment that is: discolouration of a glass pane, "milky discolourations", discolouration of metal components, "rainbow steel", blue discolourations, chipping of paint, gasket discolourations, deformation of steel components.
- 19) Warranty repairs accepted by the Guarantor are carried out free of charge. The guarantor can charge the costs connected with the warranty claim only in case when a claim is not accepted as a result of stating circumstances which are listed in points 16 and 17 mentioned above.
- Notification of complaint can be considered positively only in the case of:
 - a) keeping the time-limits mentioned in this document;
 - b) fulfilling the other terms and conditions of the warranty;
 - c) presentation of product proof of purchase that is invoice or fiscal receipt, the other proof of purchase, in compliance with the regulations;
- Device installation can be carried out by a person holding general installation qualifications but an entry and stamp on the Warranty Card are required.
- 22) Device's first start-up, any repairs and other activities, which are not supposed to be carried out by the User according to the operating manual, can be carried out only by an authorized service trained by the Guarantor. The device's first start-up is payable by the Purchaser.
- 23) During the execution of the warranty repair the customer is responsible for securing the location of repair, including the system of fireplace insert, adjacent floor, walls etc. If the repair requires to the removal of the housing, then the user is responsible for such removal. Signing the complaint form, indicates that the customer does not have any remarks related to the condition of the equipment's surroundings, including the condition of the system, floor, walls etc. after completion of the repair.
- 24) Warranty repair is made in the location where the product is operated. If the claim applies to part of the product, including electronic equipment /electronic controller, fan etc. then the given part should be sent to the Guarantor at his expense. Returning faulty equipment is a condition to accept the claim and replace this equipment for free. Not returning the above-mentioned part within seven (7) working days will be subject to not accepting the claim and to charging costs to the buyer.
- 25) Provisions of this document shall not limit, in any way, the rights resulting from the claim filed based on the statutory guarantee. The warranty also had no influence on the other clamps of the Purchaser, according to the provisions of law including those concerning non-conformity of goods with the contract. The Purchaser can exercise powers from the statutory warranty regardless of powers resulting from the guarantee. If the purchaser exercises his powers resulting from the warranty, the period for execution of powers resulting from the warranty will be suspended from the date of notice about the defect. This period will be continued from the date of refusal by the Guarantor about the execution of obligations resulting from the warranty or ineffective lapse of time for their execution.
- 26) For matters not covered with this document and the Warranty Card the provisions of the Civil Code art. 577-581 shall apply.

12.1. WARRANTY CONDITIONS "48H SERVICE"

- 1) The "48h Service" program covers the heating equipment manufactured by DEFRO R. Dziubeła sp. k.
- Any complaints are to be made at a sales outlet or directly at the Company by fax. no. 41 303 80 85, e-mail: serwis@defro.pl, or by a letter to the company's address.

- Fault registration can be completed if the Purchaser has a purchase confirmation and has filled in the Warranty Card correctly including a complaint sheet.
- 4) The "48h service" ensures that DEFRO R. Dziubeła sp. k. does its best to remove any faults which make it impossible/difficult for the equipment to operate within the period of two business days from the day of fault registration.
- 5) Fault removal time may be prolonged for reasons not dependent on DEFRO R. Dziubeła sp. k., such as the necessity of replacement of construction elements, lack of spare parts at the supplier, adverse weather conditions /force majeure/.
- Failure to carry out repairs within this period cannot constitute a ground for any claims against DEFRO R. Dziubeła sp. k. and Authorized Service Partner.
- 7) To facilitate contact with service, a service hotline for Customers has been set up: 509 702 720 and 509 577 900. If you call on these numbers, you will receive the necessary information and help with any service issue.

We kindly inform you that the possible replacement of the equipment component, with the working one, claimed by the user is not unambiguous with the admission of the equipment user's warranty claims and does not end the complaint processing procedure. DEFRO reserves the right to charge the equipment's user with component replacement/repair costs, which after expertise/repair was stated as damaged by factors independent of the manufacturer (e.g. short-circuit in the electric system, overvoltage, flooding, mechanical damages not visible to the naked eye etc.) and which damages were not able to be stated during repairing in the location of equipment operation by the service, within 60 days from date of carrying out the repair. DEFRO will issue an appropriate invoice for the replacement/repair of the subject component with the enclosed expertise protocol. At the same time, we inform you, that lack of payment for the invoice including the above-mentioned costs within 14 days from its issuance results in an irrevocable loss of warranty for the used equipment and this information will be entered into our computer supervision system for equipment within the warranty period. The date when the due amount is credited to the bank account given in the mentioned invoice is treated as the payment date.

WARRANTY CARD

Confirmation of equipment's quality and completeness

In accordance with the conditions stated herein, a warranty for a stove

(stamp and signature of salesperson)	(stamp and signature of salesperson)	(stamp and signature of company starting up the equipment)
